

TRANSFORM YOUR REPORT DATA IN MINUTES

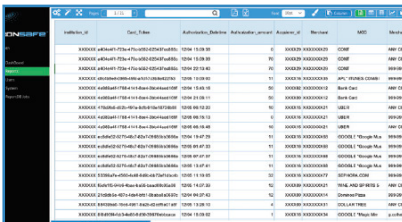

IronSafe extracts and transforms ANY report file type from ANY source system into usable database structures, automatically allowing users to quickly analyze and visualize their report data.

EXTRACT YOUR DATA

IronSafe automatically extracts report content into database tables that you can then extract to CSV or use to populate your own or third party analytical tools:

- Automated template authoring
- Any report format, including PDF
- Any application system report format
- Output to CSV, databases or data warehouses
- Extract data from different reports and databases into one database
- Provide data extractions to existing Analytic tools such as Power BI® and Tableau®

ANALYZE YOUR DATA

When your report content is in database tables, research is fast:

- Trending insights from data
- Filter and search transaction data
- Gain insights to financial and operational trends
- Purchase trends for marketing promotions
- Account Receivable and Payroll Analyst
- Analyze Customer or Patient Profitability
- Web-based analyzer, pivot table or spreadsheet view available in ReportDB

VISUALIZE YOUR DATA

Know the story your report data has to tell:

- Graph key performance measures
- Instant report data dashboard updates upon automated report ingestion
- Graph program volume, cash balance, income
- Build custom graphs and charts
- Dashboard publishing for executive view

BUSINESS CHALLENGE

The data you need to answer your most vital business questions lies siloed across numerous static reports. Gathering this data from those reports can be challenging, time consuming, and too, often requires special expertise to draw it from hard-to-decipher formats. IronSafe ReportDB is an easy, automated way for you to secure, transform, and put to work all of your report data.

SEARCH YOUR DATA

You will be able to search for specific report data across hundreds of generations of report instances to quickly find an account number, dollar value, or other critical search criteria in seconds.

REPORTDB API

Get creative! Bring Report Data from **multiple different reports** into one database schema or CSV for use in other applications, automatically eliminating laborious, manual table building.

PCI SECURITY

Secure Your Data. **Keep it safe, keep it secret.** Your reports contain vital, confidential information. IronSafe stores your historical reports in one PCI compliant, secure report warehouse. Secure all your reports under lock and key, even down to the page level when needed. IronSafe ReportDB has passed PCI compliance testing every year since 2013.

REPORT REPOSITORY

Securely store your original reports. Whether reports are produced in-house by your banking core system reports, card processor reports, network reports, or other sources, IronSafe ReportDB can store them, extract their content, and present their content in dashboard analytics. The IronSafe Repository feature allows you to automatically store and delete historical generations of any report based on your retention policies.

EASY SETUP

Data science is complex. IronSafe ReportDB becomes your in-house rocket-scientist, so you don't need to hire one. Our visual editor reads your reports right along with you, rapidly assisting you in setting up the data tables that you need from your reports. Set it up once, then see the story your report data tells you automatically, every day.

MORE

- On-premises or cloud based
- Low entry, subscription-based licensing
- Dashboard user messaging
- Online training videos and documentation
- Try-before-you-buy guarantee

ABOUT IRONSAFE

IronSafe LLC has developed a state of the art, secure, PCI compliant software solution called ReportDB Data Extraction and Analytics that can extract data from any report structures— any existing application report source or external report source —into denormalized database structures for download to CSV, analytical viewing, key performance dashboards, trend analysis, or to populate your data warehouse schema to use against your own analytical tools. This proprietary technology is being used by over 3500 financial institutions, hospital systems, government and manufacturers. IronSafe ReportDB has a seamless implementation with many of the reports that you already receive today, and also provides 100% encryption of report generations within the solution.
